Part II. Analysis of the Program (strengths and weaknesses in terms of demand, efficiency, and effectiveness based on an analysis of the data)

The program is healthy. Demand based on new and replacement positions in the county is significantly higher than the number of majors or graduates. Classes consistently fill at more than 90% capacity and the cost per student semester hour is reasonable compared to other applied technical education programs. A three year trend analysis indicates strength for the majority of data elements. The only weak areas are some of the Perkins core indicators. Reasons for declines in areas of achievement and employment are varied. In some cases, students leave school before graduating because they need to work. Others find jobs not reported on the state’s employment record; this is especially true of the construction trades since employers often hire workers as independent contractors, which equates to being self-employed. Weaknesses in this area are offset by a positive increase in the persistence of majors’ fall to spring 2006-07, an indication that students are succeeding and staying with the program. Faculty will monitor weak areas closely and will continue efforts to promote the program as a viable option for non-traditional participation.

Significant Program Actions (new certificates, stop-out; gain/loss of positions, results of prior year's action plan)

Effective fall 2007, the Carpentry Program modified its first semester curriculum to split its one 12-credit class, Carpentry 20, into two classes. The new classes are Carpentry 20A (3 credits) and Carpentry 21A (9 credits). This was done to articulate classes being offered by the construction academy at local high schools on the Big Island of Hawai'i. Students enrolled in the construction academy classes who earn a "B" or better have an opportunity to earn credits that can be applied to the Carpentry program at Hawaii Community College.

Part III. Action Plan

The Carpentry Program will closely monitor the progress of the Construction Academy's students that enter the Hawaii Community College Carpentry Program to insure the 3 credits articulated are justified by what is taught at the high schools.

The program will continue to work with Department of Hawaiian Home Lands to construct an affordable residential home on Hawaiian Home Lands for a qualified Hawaiian applicant.

The Carpentry Program will continue to manage its resources by promoting recycling of valuable construction materials throughout the academic year.

Part IV. Resource Implications (physical, human, financial)

1. Replacement of the 1987 Crew Cab Truck \$45,000.
2. Upgrade stationary machines to industry standards \$10,000
3. Facility upgrades \$1,255,000.00
Building 390 Shop - projected start date - academic year 2008-2009
Building 390 Bathroom - projected start date - academic year 2009-2010
